

Mimi Stanimirova Vladeva

SOFTWARE ENGINEER | IOT |WEB |MOBILE APPLICATION DEVELOPMENT | ROBOTICS

Contact

Sofia, Bulgaria

mimivladeva@gmail.com

0887777940

Skills

Software Development

- Object-Oriented Programming
- Software Development
- System Integration
- REST APIs
- JSON
- Database Integration
- Debugging, Problem Solving & Analytical Thinking
- Adaptability to Dynamic Environments
- Team Collaboration in Technical Environments
- Git / GitHub
- Agile / Scrum

Android Development

- Android Studio, Java
- Android SDK, Android Jetpack(RecyclerView, ViewModel,Navigation)
- MVVM
- Firebase Authentication, Firebase / Firestore
- REST API integration
- JSON

Web Development

- HTML5, CSS3, JavaScript, TypeScript / TSX
- Angular (Basic Knowledge)
- Responsive Web Design
- UI/UX
- SQL, Booking Systems, Role-Based Access / Permissions
- Web Applications
- Spring / Spring Boot, Spring Security , Spring Web, Spring Data JPA
- Maven
- PostgreSQL, SQL, NoSQL
- Firebase Authentication, Cloud Firestore

About Me

Software Engineer with a Bachelor's degree in Interactive Technologies from Universitat Politècnica de València, Spain, with hands-on experience across software development, Android applications, web development, IoT and robotics.
I have worked on multidisciplinary projects combining software, databases, APIs, mobile applications, sensors and embedded systems. My experience includes developing Android applications with Java, Firebase/Firestore and Android Studio, building web applications with HTML, CSS, JavaScript and TypeScript, and developing IoT and embedded solutions using C/C++, ESP32, M5Stack and Arduino.
I also have practical experience in robotics, including C++, Python, ROS 2, ESP32, FreeRTOS, autonomous navigation and sensor integration. My projects have involved the complete development process, from UI/UX design and system architecture to implementation, debugging, testing and documentation.
I have worked in Agile/Scrum teams, using Git/GitHub and Trello for version control, collaboration and task management. I enjoy solving technical problems, learning new technologies and connecting different technologies to build complete, functional solutions.

Education

Bachelor's Degree in Interactive Technologies

Universitat Politècnica de València (UPV) – Gandia Campus | 2022 – 2026

Professional Experience

1.Web Developer — VG Detailing
Gandia, Spain | May 2025 – October 2025
Developed a professional business website using HTML, CSS and JavaScript, including online booking, appointment management and an interactive pricing calculator. Focused on responsive design, UX/UI and customer experience while working directly with the client.

2.Web Developer — SM Racing
Pego, Spain | May 2026 – August 2026
Developed a responsive landing page using HTML and CSS, implementing the page structure, visual components and responsive layouts according to the client's requirements and feedback.

3.Co-Founder & Department Manager — Generación Espontánea, Universitat Politècnica de València
Valencia, Spain | 2025 – 2026
Co-founded and managed departments within a university robotics project developing a robotic dog for people with visual impairments. Coordinated technical work and multidisciplinary teams while contributing to software, embedded systems, sensors, ROS 2, Python, ESP32, Raspberry Pi and autonomous navigation.

IoT & Embedded Systems

- ESP32, M5Stack
- Arduino, Raspberry Pi
- Real-Time Systems, FreeRTOS
- Hardware–Software Integration
- Embedded Programming
- Sensor Data Acquisition

Robotics

- C++, Python
- ROS 2, Nav2,RViz, Gazebo
- TurtleBot3, LiDAR
- Autonomous Navigation, Obstacle Avoidance, Sensor Integration

Game Development

- Unity
- C#
- Game Logic, Gameplay Mechanics
- Level Design
- Virtual Reality (VR) or VA Development

UI/UX

- Axure
- Figma
- User-Centered Design
- Wireframing
- Interface Design
- Responsive Design

Programming Languages

Java, C++, C, C#, Python, JavaScript, TypeScript, SQL,HTML,CSS

FRAMEWORKS & TECHNOLOGIES

Android Studio, Android SDK, Android Jetpack, PostgreSQL, SQL, NoSQL Firebase, Firestore, REST APIs, JSON, ROS 2, Nav2, FreeRTOS, Unity, Linux,Shell/Bash scripting, Arduino, ESP32, M5Stack, Raspberry Pi, SQL, Maven, Spring Boot,

TOOLS

Git, GitHub, Trello, Figma, Axure, MATLAB, GazebO, RViz, BlendeR,, Arduino IDE

Languages

- Bulgarian – Native
- Spanish – Full Professional Proficiency (DELE B2 Certified)
- English – B2

Projects

1.Bachelor's Thesis – Real-Time Intention Detection System for Autonomous Mobile Robot
Technologies: C++, Python, ROS 2, Nav2, ESP32, FreeRTOS, Raspberry Pi, TurtleBot3, LiDAR, Gazebo, RViz, UART, Linux, Embedded Systems
Designed and developed a real-time intention detection system for an autonomous robotic guide dog. Integrated ESP32 and FreeRTOS with ROS 2 and worked on autonomous navigation, obstacle avoidance, sensor integration and real-time processing. Used LiDAR, Gazebo and RViz for navigation development, simulation and validation, integrating embedded systems with the robotic navigation architecture.

2.VIMYP – Environmental Monitoring System
Technologies: Java, Android Studio, Firebase/Firestore, REST APIs, SQL, Bluetooth, Maps, Data Visualization
Developed an Android application for environmental monitoring with authentication, facial authentication, REST API and database integration. Implemented sensor data visualization through maps and graphs, notifications based on sensor thresholds, and different user roles and permissions. Worked as part of a five-person Agile/Scrum team using Trello.

3.PetCare – Smart IoT Pet House
Technologies: Java, Android Studio, XML, Firebase/Firestore, ESP32, M5Stack, Raspberry Pi, IoT, Sensors
Developed an Android application for managing pets and controlling an IoT smart house, including authentication, Firestore database integration, RecyclerView and ViewModel. Designed the application UI/UX and integrated the Android system with ESP32, M5Stack and sensors. Worked in a multidisciplinary team on software, database and hardware integration.

4.VM Agency – Professional Business Website
Technologies: TypeScript/TSX, CSS, Git, GitHub, UI/UX
Developed a responsive professional business website using TypeScript/TSX and CSS, with reusable components for navigation, hero, services, projects, FAQ and footer sections. Focused on responsive design, usability, visual consistency and interactive interfaces while using Git/GitHub throughout development.

5.Yummy Fish – Game Development Project
Technologies: Unity, C#, GitHub, Trello
Designed and programmed an arcade-style survival game using Unity and C#, implementing gameplay mechanics, progression systems and game logic. Worked on level design and gameplay experience while managing tasks through Trello and collaborating through GitHub.
